The EC in its 129th meeting decided to consider the application after verification of requisite pollution control measures/equipment by CPCB. Now, CPCB has submitted the site visit report recommending that the industry is having valid CTO and HW authorization from MPPCB. Also provided adequate capacity of APCDs, ETP, raw material & product storage area, separate hazardous waste storage room. The plant and machineries are under covered shade with cemented floor and maintaining very good housekeeping in entire plant area. Therefore, permission may be granted for importing of Spent Catalyst containing Vanadium, Nickel, Molybdenum and Cobalt for recycling.

Accordingly, the matter is placed before EC.

The applicant has mentioned that da Vinci X system as per their understanding is akin to a new system. It goes through a robust manufacturing process under ISO13485 Quality system requirements and IEC60601, Electrical and Electronic Safety requirements. It also goes through a battery of test, same as a new system, to confirm its safety and efficacy. The product is released for distribution with a new serial number and customer using it would be the first user of the product. The only difference between the system under consideration and a new one is that X system is not entirely made of virgin components (base & column are salvaged from old systems). So, they further seek guidance on its applicability with respect to HOWM rules, as they believe the system should not be treated as “used” or “waste”. The system has USFDA approval and EU CE marking.
